

What's New in Sage 100 2021.0

Sage 100 is releasing 29 new features to support our 15,000+ active customers and to show our continued investment in this well-loved product. The Release Notes will provide you with the comprehensive list of what's available. Below are some key features we're really excited to highlight.

Big New Features

Enhanced Security and Communications

We've added templates to make it easier for customers to deploy reports, messages, and set up new users based on their users' roles. For example, anyone with the role "admin" can be distributed a task or communication within the platform. This new Role Security enhancement also puts up guardrails to limit team members from making edits or viewing records that they shouldn't have access to. This enhancement is not only more convenient, it also makes it easier for our customers to prove SOC compliance because they can run a report to show exactly who has access to what part of Sage 100.

Improved Record Keeping Capabilities

Customers who send invoices, contracts, and other business documents through Sage 100 now have a detailed log to help them confirm these emails are sent and received without any issues. We now support PDFs, Word docs, JPEGs, and other file types to be associated to our journals and registers.

Expanded email options

We now offer Oauth to authenticate SMTP email requests. Customers who use email providers like Gmail or Outlook which require 2-step authentication can now use those email providers directly in Sage 100.

Incremental Improvements

- Print all recap reports at once – now, accountants can run all sales recap reports with just one click.
- If there's a difference in receipt of goods vs. receipt of invoices, we now provide customers with a date range so that they can quickly identify where the unreconciled balance comes from.
- Purchase Orders module now displays line detail for receipt invoices and non-employee compensation form is now available in purchase order.
- And many more!

In case you missed it:

We've launched 2 new exciting offerings for our Sage 100 customers in the last year.

Host your Sage 100 data on Microsoft Azure with Sage Partner Cloud

Our new program allows customers to keep the Sage 100 product they know and love while hosting their data in the same reliable cloud provider 95% of Fortune 500 companies know and trust. Contract your business partner to learn more.

Launch of Sage Data and Analytics

Get actionable data faster, improve data confidence, and reduce IT costs with the powerful, easy-to-use business intelligence toolkit for Sage 100. Sage Data and Analytics gives Sage 100 users a powerful and easy-to-use business intelligence toolkit complete with live dashboards, graphical cashflow analysis and more—right out of the box.
